

who command with options

Who command has some options to make the custom output. Here are some samples on day-to-day usage.

1) Indicate the time and date of the last reboot

To do this, use **-b** options

```
$ who -b
```

```
pungki@dev-machine:~$ who -b  
system boot 2013-12-21 15:52
```

We can see that system was boot the computer on December 21st , 2013 at 3:52 PM

2) Indicate the current run-level of the init process

With **-r** option, who will print a current run-level of the init process.

```
$ who -r
```

```
pungki@dev-machine:~$ who -r  
run-level 2 2013-12-21 15:52  
pungki@dev-machine:~$ who -H  
NAME      LINE      TIME          COMMENT  
pungki    tty7      2013-12-21 15:53 (:0)  
pungki    pts/0     2013-12-21 15:54 (:0.0)  
leni      pts/2     2013-12-21 16:17 (192.168.0.108)
```

5) Print only information about current terminal

We can use **-m** option to do this.

```
$ who -m
```

```
pungki@dev-machine:~$ who -m  
pungki pts/0 2013-12-21 15:54 (:0.0)
```
