

Attributes of <tr> tag: The tag <tr> creates a row in the table. It has following attributes-

1. **bgcolor:** to provide a background color for the entire row.

Syntax:

```
<tr bgcolor = "red">
  ---
  ---
  ---
</tr>
```

2. **height:** to set a height of defined pixel for the entire row.

Syntax:

```
<tr height = "100">
  ---
  ---
  ---
</tr>
```

3. **align:** to align the contents of entire row at once. It can be left or center or right.

Syntax:

```
<tr align = "center">
  ---
  ---
  ---
</tr>
```

Attributes of <th> or <td> tag: The tags <th> or <td> create a cell in the table. These tags have following attributes-

1. **bgcolor:** to provide a background color for the cell.

Syntax:

```
<td bgcolor = "yellow"> - - - </td>
```

- 2. align:** to align the contents of the cell. It can be left or center or right.

Syntax:

```
<td align = "right"> - - - </td>
```

- 3. rowspan:** to give span to the cell towards the lower rows.

Syntax:

```
<td rowspan = "2"> - - - </td>
```

- 4. colspan:** to give span to the cell towards the next columns.

Syntax:

```
<td colspan = "2"> - - - </td>
```

Assignment:

- 1.** Apply all the attributes of <tr> and <td> tags in the following table in HTML.

Name	Physics	Chemistry	Mathematics
Anand	78	69	90
Praveen	65	72	81
Suraj	86	88	94
